Age Range: 9 - 12 years

Grade Level: 2 and up

Customer Reviews

Ever dream of becoming a herpetologist? Maybe you don't even know what that is, but if not you probably know if you are into spiders & snakes. Maybe lizards, turtles, tortoises, crocs, and gators have that wow factor for you too. If they don't, just walk way away from this book fast because there are loads of them in this book! Pssssss ... this book is for snake lovers who want to know more about their favs. Everyone has heard of rattlers, but did you know that awesome fiddlers and banjo players put [their] rattles inside their instruments? • No! Yes, and that's just one interesting fact you'll discover about snakes inside this book. Some of the facts are just eeew, but some are mega-cool. There is a bit of science behind snakes and a few unfamiliar words that will pop right out at you. You'll quickly learn that the snake is from a class of animals we call Reptilia. Next you'll slither over into a section about their taxonomy, a way of organizing our natural world. • If you don't know about their kingdom, phylum, class, order, family, genus, and their species, you will after you study a bit about them. Perhaps you just want to look at snakes, but that's not a problem. There are a ton of them to look at. You'll be able to pore over blind

snakes, shield-tailed snakes, pipe snakes, sunbeam snakes, pythons (oh, yeah!), boas, wood snakes, file snakes, and more! Venom is so not cool if you get a snake bite, but awesome to learn about. There are even different varieties. They are called neurotoxins, cytotoxins, cardiotoxins, and hemotoxins. Did you know that the same snake venom that can kill people can also save them? • It can. You™ll learn about the anatomy from head to the end of that tail in snakes, not just those fangs.
