The Paper Airplane Book (Puffin Story Books)

Synopsis

How to build great paper airplanes and learn what makes them fly! What keeps a paper airplane in the air? How can you make a paper airplane go for a really long flight? How can you make a cool stunt plane that loops, turns, and dives at will? Learn the answers to these questions and many more! This book details not only how to design amazing paper airplanes, but also the principles of flight and how planes are able to fly. The Paper Airplane Book is full of experiments and suggestions that will allow readers to design their own airplanes while introducing them to the physics and science of flight. Lots of information about the principles of flight and the "hows" and "whys" of airplane design. Children's Literature The principles of flight and airplane design are elucidated in this book of entertaining experiments with paper airplanes. Booklist

Book Information

Series: Puffin story books

Paperback: 48 pages

Publisher: Puffin Books (September 30, 1976)

Language: English

ISBN-10: 014030925X

ISBN-13: 978-0140309256

Product Dimensions: 7.2 x 0.1 x 8.9 inches

Shipping Weight: 4.8 ounces (View shipping rates and policies)

Average Customer Review: 3.9 out of 5 stars See all reviews (9 customer reviews)

Best Sellers Rank: #405,012 in Books (See Top 100 in Books) #34 in Books > Children's Books > Activities, Crafts & Games > Crafts & Hobbies > Papercrafts #179 in Books > Children's Books > Cars, Trains & Things That Go > Planes & Aviation #180 in Books > Children's Books > Education & Reference > Science Studies > Physics

Age Range: 8 - 12 years

Grade Level: 3 - 7

Customer Reviews

my dear old granddad (god rest his soul) did not spend a lot of time with my family, and his gifts were sometimes a bit off-target, as a result. THIS GIFT WILL STAY ON-TARGET! I was just a lil' munchkin, or as a certain childhood favorite of fiction used to say, I was "the littlest end of nothin' sharpened!" Granddad was a physics professor during a time, and in a way, quite brilliant. He

somehow ended up with the misfortune of being a teacher (He taught many subjects over the years, and I think that this one was math) of not only instructing a young man known as Theodore Kaczynski (I apologize for what must be atrocious spelling, but it's been a while...) but finding that the boy was, at that point in time, more than lucid enough to instruct the class in his absence should an emergency arise (these changes such as Ted had undergone usually manifest only in late teenage/early adult years with a COMPLETE psychological metamorphosis that seems, to all involved, no where close to being a "180"). We knew (or wondered) of him as "Unabomber". Coincidences aside, Granddad had a remarkable ability to teach kids in a way that did not bother them in the least. When reading books such as this one, a child can learn the properties of quantum/gravimetric physics so comfortably that all they realize is that they are learning how to create, design, and customize paper airplanes for optimal performance according to their own personal tastes and preferences, customizing potential trajectory, distance, air speed velocity, and they even learn a bit of history as well. If I am not mistaken, one of my favorite planes from this book is based on an actual aerial transport of roughly similar proportions!
